-!- FUNCTION: GALACTOSE-BINDING PROTEIN WHICH RECOGNIZES SPECIFIC CARBOHYDRATE STRUCTURES AND AGGLUTINATE A VARIETY OF ANIMAL CELLS BY BINDING TO CELL-SURFACE GLYCOPROTEINS AND GLYCOLIPIDS. MAY BE CALCIUM-DEPENDENT LECTIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- MISCELLANEOUS: Met-33 has been shown to be oxidized to methionine sulfoxide (Ref.2) but this probably results from sample treatment prior to mass spectrometry.
-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ku Q., Wu X.-F., Xia Q.-C., Wang K.-Y.; "Cloning of a galactose-binding lectin from the venom of Trimeresurus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1, A Sequence 1, A Sequence 1, A Sequence 1, A Sequence 5, A Sequence 5, A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1, Application US/08468413

Patent No. 5861494

GENERAL INFORMATION:
TITLE OF INVENTION: Human Colon Specific Gene
NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:
ADDRESSEE: CRAELLA, BYRNE, BAIN, GILFILLAN,
ADDRESSEE: CECCHI, STEWART & OLSTEIN
STREET: ROSELAND
CITT. ROSELAND
STATE: NEW JERSEY
COUNTRY: USA

                                                                                                                                                                                                                                                                                                                            Sequence 1, Application US/09146969;
Patent No. 628858;
GENERAL INFORMATION:
TAPLICANT: Dieckgraefe, Brian K.
TITLE OF INVENTION: Gene Markers for Chronic Mucosal Injury;
FILE REFERENCE: 04255.75314;
CURRENT APPLICATION NUMBER: US/09/146,969
CURRENT FILING DATE: 1998-09-04;
NUMBER OF SEQ ID NOS: 5
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             777
